

Chemical Advice

This document is designed to provide advice to Rotowash operatives regarding the safe use of cleaning chemicals with the Rotowash M class range of machines.

Before using any chemical always follow the Chemical Manufacturers instructions / method statement and check the product label or **MSDS** (material safety data sheet) / COSHH (control of substances hazardous to health) sheet for compatibility with Rotowash.

Please note not all chemicals require classification under COSHH however they should have a MSDS listing chemical contents, PH rating Etc.

If necessary appropriate PPE as supplied must be worn at all times when handling Chemicals / using Rotowash

Never pour neat chemicals into the machine or mix different chemicals together.

Never use a chemical which is not compatible with Rotowash, or not intended for the task required.

Always follow the Rotowash user guide when using the machine.

Rotowash Machines are designed for safe use with correctly diluted chemicals which meet the following criteria only: (**see rotowash instruction manual**)

- **PH Value 6.5 to 9.5.**
 - **Non Foaming**
 - **Non Hydrochloride**

Please Note: The use of cleaning fluids which do not fall within the ph range, foam excessively or contain Hydrochloride based substances invalidates the Warranty.

Usually warm (Max 50deg C) water is all that is necessary to clean the floor with a rotowash. However, there will be times when a chemical is necessary, for example to remove heavy stains, for infection control, or for odour control.

All Rotowash Sales Executives are issued with the following chemicals & MSDS for demonstration / training purposes: (MSDS are available upon request)

Altraguard: safety floor cleaner. For use on hard floors as a general cleaner

Zybox Fresh: (Odour master) for use on carpets as an odour neutralizer

There are a vast variety of both chemicals and manufactures on the UK and European Market place, Rotowash Ltd does not endorse any manufacturer or any particular products.

Correct chemical supply is the responsibility of the purchaser and only products which are intended for the task required and meet the above criteria should be used.

For further advice on chemical choice & technical information please contact the chemical supplier/flooring manufacturer
